September 17th, 1917

Sir R. T. Glazebrook,

Director, National Physical Laboratory,

London.

Dear Sir:

Professor Angus, the head of our department of Mechanical Engineering in the University of Toronto, has asked me to communicate with you in regard to the establishment by the University of Toronto of a department of Aerodynamics. We have ordered from the Cambridge Scientific Instrument Company a wind balance which is to be used in a four foot tunnel for purposes of investigation. At present the Imperial Royal Flying Corps has its Canadian Headquarters established in our University and the Cadet School is using a number of our rooms and buildings. The facilities for our developing a department of Aerodynamics are therefore at the present time unusually good. If you can help us in any way to secure information that may be of servic to us we shall esteem it a great favour.

Yours sincerely,

President.
